EXAM NUMBER __________

NATS 101, Section 13, Fall 2010
Midterm Examination #1
September 20, 2010

Name:__________________________             SID: _______________

Instructions:

• Write your name and student ID on ALL pages of the exam.
• In the multiple-choice/fill in the blank section, please fill-in only ONE answer. Use the multiple choice scantron answer sheet. Turn this sheet in separately when you hand in your exam. You should also record multiple choice answers next to the question, as scantron sheets will not be returned.
• In the short answer section, please make sure to read each question carefully and show your work where it is required. Should you need more room to answer your questions, you can use the other side, and indicate it with the answer.
• You CANNOT use a calculator.
• You are NOT allowed to use your book or notes on this exam.
• You are NOT allowed to talk about or look at anyone else’s exam. If you commit such an offense, you will be awarded a 0 and the offense will be noted in accordance to The Code of Academic Integrity.
• Good luck!

Score:

Multiple Choice Section: _______/ 25 points

Short Answer Section: _______/ 15 points

Bonus Questions: _______/ 5 points

Total: _______/ 40 points

Helpful constants:

Constant in Stefan-Boltzmann law = 6.0 × 10⁻⁸ W m⁻² K⁻⁴ (approximately)

Constant in Wien’s displacement law = 3000 μm K (approximately)

VERSION A
Scoring: Each question is worth 1 point in this section.

1. If the temperature of an object is doubled, by what factor does its total radiant energy per unit area increase?
   a) 2  
   b) 8  
   c) 16  
   d) 32  
   e) None of the above.

2. On June 21st, the sun is directly overhead at solar noon at which of the following special locations with respect to latitude on Earth?
   a) The equator  
   b) The Tropic of Capricorn  
   c) The Tropic of Cancer  
   d) The Arctic Circle  
   e) The Antarctic Circle

3. Which of the following locations has the highest relative humidity?
   a) Temperature: 8°F, Dew point: 7°F  
   b) Temperature: 25°F, Dew point: 20°F  
   c) Temperature: 40°F, Dew point: 33°F  
   d) Temperature: 70°F, Dew point: 60°F  
   e) The relative humidity at all of the above stations is the same.

4. Which of the following wavelengths corresponds to infrared radiation?
   a) $10^{-3}$ m (or 1000 $\mu$m)  
   b) $10^{-5}$ m (or 10 $\mu$m)  
   c) $10^{-7}$ m (or 0.1 $\mu$m)  
   d) $10^{-9}$ m (or 0.01 $\mu$m)  
   e) None of the above

5. Which of the following U.S. cities would you expect to have the largest annual variation in monthly average temperature?
   a) Miami, Florida  
   b) Seattle, Washington  
   c) Chicago, Illinois  
   d) Atlanta, Georgia  
   e) None of the above. The annual variation in temperature at all of these places is the same.

6. Which of the following modes of heat transfer refers to the mass movement of a fluid or gas?
   a) Conduction  
   b) Convection  
   c) Radiation  
   d) Latent Heat  
   e) None of the above

VERSION A
7. Which of the following substances has the highest heat capacity?
   a) Liquid water
   b) Air
   c) Common metals, like iron
   d) Wood
   e) Soil

8. At Stonehenge Aoteoroa, the replica of Stonehenge located in New Zealand, on December 21 the sun will rise in the ______ and set in the ______. *Hint: New Zealand is located at approximately 40ºS latitude in the South Pacific Ocean.*
   a) East, West
   b) Southeast, Northwest
   c) Southeast, Southwest
   d) Northeast, Northwest
   e) Northeast, Southwest

9. Which of the following factors is related to the occurrence of seasons on Earth?
   a) The eccentricity of Earth’s orbit.
   b) The rate of rotation of the Earth about its axis.
   c) The obliquity of the Earth’s axis with respect to its orbital plane.
   d) All of the above.
   e) None of the above is related to the occurrence of seasons.

10. Atmospheric pressure is measured using which of the following devices?
    a) Thermometer
    b) Barometer
    c) Anemometer
    d) Hygrometer
    e) None of the above

11. What is the most abundant gas in the atmosphere?
    a) Oxygen
    b) Nitrogen
    c) Carbon dioxide
    d) Argon
    e) None of the above.

12. On a location on the equator, like Ecuador as discussed in class, the longest day of the year would occur on approximately which date?
    a) March 21
    b) June 21
    c) September 22
    d) December 21
    e) None of the above. The length of the day is the same all year round.

13. The SI units of a Newton are:
    a) kg m s\(^{-1}\)
    b) kg m\(^2\) s\(^{-1}\)
    c) kg m s\(^2\)
    d) kg m\(^2\) s\(^2\)
    e) kg m\(^2\) s\(^{-1}\).
14. The wavelength of maximum radiation emission of an object is:
   a) Directly proportional to its temperature.
   b) Inversely proportional to its temperature.
   c) Not related to its temperature.

15. Which of the following substances has the highest heat conductivity?
   a) Liquid water
   b) Air
   c) Common metals, like iron
   d) Wood
   e) Soil

16. Which of the following is not a way to increase evaporation from a pool of standing water?
   a) Increase the air temperature.
   b) Increase the wind speed.
   c) Increase the relative humidity of the air.
   d) Doing any of the above can increase the rate of evaporation.

17. Identify the correct conversion equation from degrees Fahrenheit to degrees Celsius:
   a) °C = (5/9) x (°F – 32)
   b) °C = (9/5) x (°F – 32)
   c) °C = (5/9) x (°F + 32)
   d) °C = (9/5) x (°F + 32)
   e) None of the above

18. Which of the following locations has the most amount of water vapor in the air?
   a) Temperature: 8°F, Dew point: 7°F
   b) Temperature: 25°F, Dew point: 20°F
   c) Temperature: 40°F, Dew point: 33°F
   d) Temperature: 70°F, Dew point: 60°F
   e) The amount of water vapor in the air is the same at all of the above stations.

19. Under which of the following conditions would the minimum temperature mostly likely be the lowest?
   a) A clear and calm night
   b) A cloudy and calm night
   c) A clear and windy night
   d) A cloudy and windy night
   e) The minimum temperature would probably be about the same in all of the above conditions.

20. The SI units of a Pascal, the fundamental unit to measure air pressure, are:
   a) kg m s⁻¹
   b) kg m s⁻²
   c) kg m² s⁻²
   d) kg m³ s⁻³
   e) None of the above

21. The average temperature of Mars is about 200 K and the average temperature of Earth is about 300 K. What is the approximate percentage of radiant energy per unit area emitted by Mars as compared to Earth?
   a) 10%.
   b) 20%.
   c) 30%.
   d) 45%.
   e) 66%.
22. The Earth is closest to the sun in which northern hemisphere season?
   a) Winter: December to February
   b) Spring: March to May
   c) Summer: June to August
   d) Fall: September to November
   e) None of the above. The Earth is the same distance from the sun at all times during the year.

23. The temperature increases with height in which of the following layers of the atmosphere?
   a) Troposphere
   b) Mesosphere
   c) Stratosphere
   d) All of the above
   e) None of the above

24. What percentage of Earth’s atmosphere is composed of carbon dioxide?
   a) About 80%
   b) About 60%
   c) About 40%
   d) About 20%
   e) None of the above

25. The sky is blue because gases in the atmosphere
   a) Emit their most intense radiation in the blue part of the visible spectrum
   b) Reflect blue light from the ocean
   c) Are more transparent to blue light than the other colors of visible light
   d) Scatter blue light more than the other colors of visible light
   e) All of the above
26. The sun is an object with a surface temperature of approximately 6000 K. What is the wavelength of most intense radiation emission from the sun ($\lambda_{\text{max}}$)? What type of radiation is this, as classified by the electromagnetic spectrum? (5 points)
27. Explain how the earth’s atmospheric greenhouse effect works. What atmospheric gases are primarily responsible for the greenhouse effect and why? What would happen to the surface temperature on Earth without the greenhouse effect? Feel free to use illustrations in your answer. (5 points)
28. Two common measures to report atmospheric moisture, for example in a TV weather report, are relative humidity and dew point temperature. Provide physical definitions of these two measurements and explain the difference between them, if any. (5 points)
BONUS QUESTION: In Arizona, in many older houses it is common to use evaporative cooling, or a swamp cooler, in lieu of any air conditioning even though it is one of the hottest places in the country. Why do swamp coolers work well in a dry, hot climate like Arizona’s, but not in a moist, humid climate like the Southeast U.S? (5 Points Extra Credit)
