

NATS 101
Section 13: Lecture 3

Weather vs. Climate

Definition of Weather

Weather: Condition of the atmosphere at a particular time and place.

Comprised of:

Air temperature: Degree of hotness or coldness

Air pressure: Force of the air above

Humidity: Amount of water vapor in the air

Clouds: Water droplets (liquid) or ice crystals (solid) above the surface

Precipitation: Water that falls from clouds and reaches ground

Visibility: Farthest distance one can see.

Wind: Horizontal movement of air

Surface Station Model (U.S.)

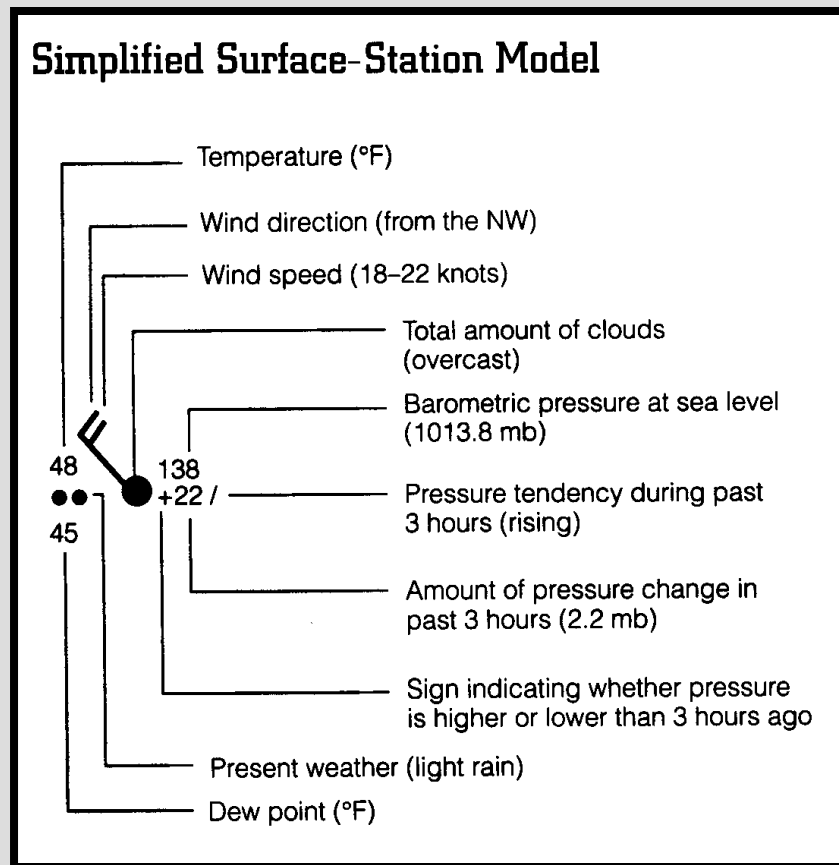

Notes: Temperature and Wind

Stations outside U.S. use degrees Celsius for temperature

Wind barb direction reverses in southern hemisphere.

Surface Station Model (U.S.)

Notes: Pressure

Leading 10 or 9 is not plotted for surface pressure

**Greater than 500 =
950 to 999 mb**

**Less than 500 =
1000 to 1050 mb**

988 → 998.8 mb

200 → 1020.0 mb

Sky Cover, Weather Symbols on a Surface Station Model

Total Sky Cover

| | |
|---|---------------------------------------|
|  | No clouds |
|  | Less than one-tenth or one-tenth |
|  | Two-tenths or three-tenths |
|  | Four-tenths |
|  | Five-tenths |
|  | Six-tenths |
|  | Seven-tenths or eight-tenths |
|  | Nine-tenths or overcast with openings |
|  | Completely overcast |
|  | Sky obscured |

Common Weather Symbols

| | | | |
|---|---------------------|---|--------------------------|
|  | Light rain |  | Rain shower |
|  | Moderate rain |  | Snow shower |
|  | Heavy rain |  | Showers of hail |
|  | Light snow |  | Drifting or blowing snow |
|  | Moderate snow |  | Dust storm |
|  | Heavy snow |  | Fog |
|  | Light drizzle |  | Haze |
|  | Ice pellets (sleet) |  | Smoke |
|  | Freezing rain |  | Thunderstorm |
|  | Freezing drizzle |  | Hurricane |

Surface Pressure Tendency

Pressure Tendency

| | | |
|---|--|--|
| ↗ | Rising, then falling | |
| ↗ | Rising, then steady; or rising, then rising more slowly | } Barometer now higher than 3 hours ago |
| ↗ | Rising steadily or unsteadily | |
| ✓ | Falling or steady, then rising; or rising, then rising more quickly | |
| — | Steady, same as 3 hours ago | |
| ↘ | Falling, then rising, same or lower than 3 hours ago | } Barometer now lower than 3 hours ago |
| ↘ | Falling, then steady; or falling, then falling more slowly | |
| ↘ | Falling steadily, or unsteadily | |
| ↘ | Steady or rising, then falling; or falling, then falling more quickly | |

Wind Speed

Wind Entries

| | Miles (statute) per hour | Knots | Kilometers per Hour |
|---|--------------------------------|---------|------------------------|
|  | Calm | Calm | Calm |
|  | 1-2 | 1-2 | 1-3 |
|  | 3-8 | 3-7 | 4-13 |
|  | 9-14 | 8-12 | 14-19 |
|  | 15-20 | 13-17 | 20-32 |
|  | 21-25 | 18-22 | 33-40 |
|  | 26-31 | 23-27 | 41-50 |
|  | 32-37 | 28-32 | 51-60 |
|  | 38-43 | 33-37 | 61-69 |
|  | 44-49 | 38-42 | 70-79 |
|  | 50-54 | 43-47 | 80-87 |
|  | 55-60 | 48-52 | 88-96 |
|  | 61-66 | 53-57 | 97-106 |
|  | 67-71 | 58-62 | 107-114 |
|  | 72-77 | 63-67 | 115-124 |
|  | 78-83 | 68-72 | 125-134 |
|  | 84-89 | 73-77 | 135-143 |
|  | 119-123 | 103-107 | 144-198 |

How to read:

Half barb = 5 knots

Full barb = 10 knots

Flag = 50 knots

1 knot = 1 nautical mile per hour = 1.15 mph

 = _____ knots

**What about what is happening
above the ground?**

Upper Air Measurements

Weather balloons, or *radiosondes*, sample atmosphere up to 10 mb.

They measure:

- **Temperature**
- **Moisture**
- **Pressure**

They are tracked to get winds using global positioning satellites (GPS)

North American Upper Air Network

Observations typically taken twice per day at the same time (00 and 12 GMT)

Note the scarcity of observations over Mexico—and the Mexican government may even cut these!

Definition of Climate

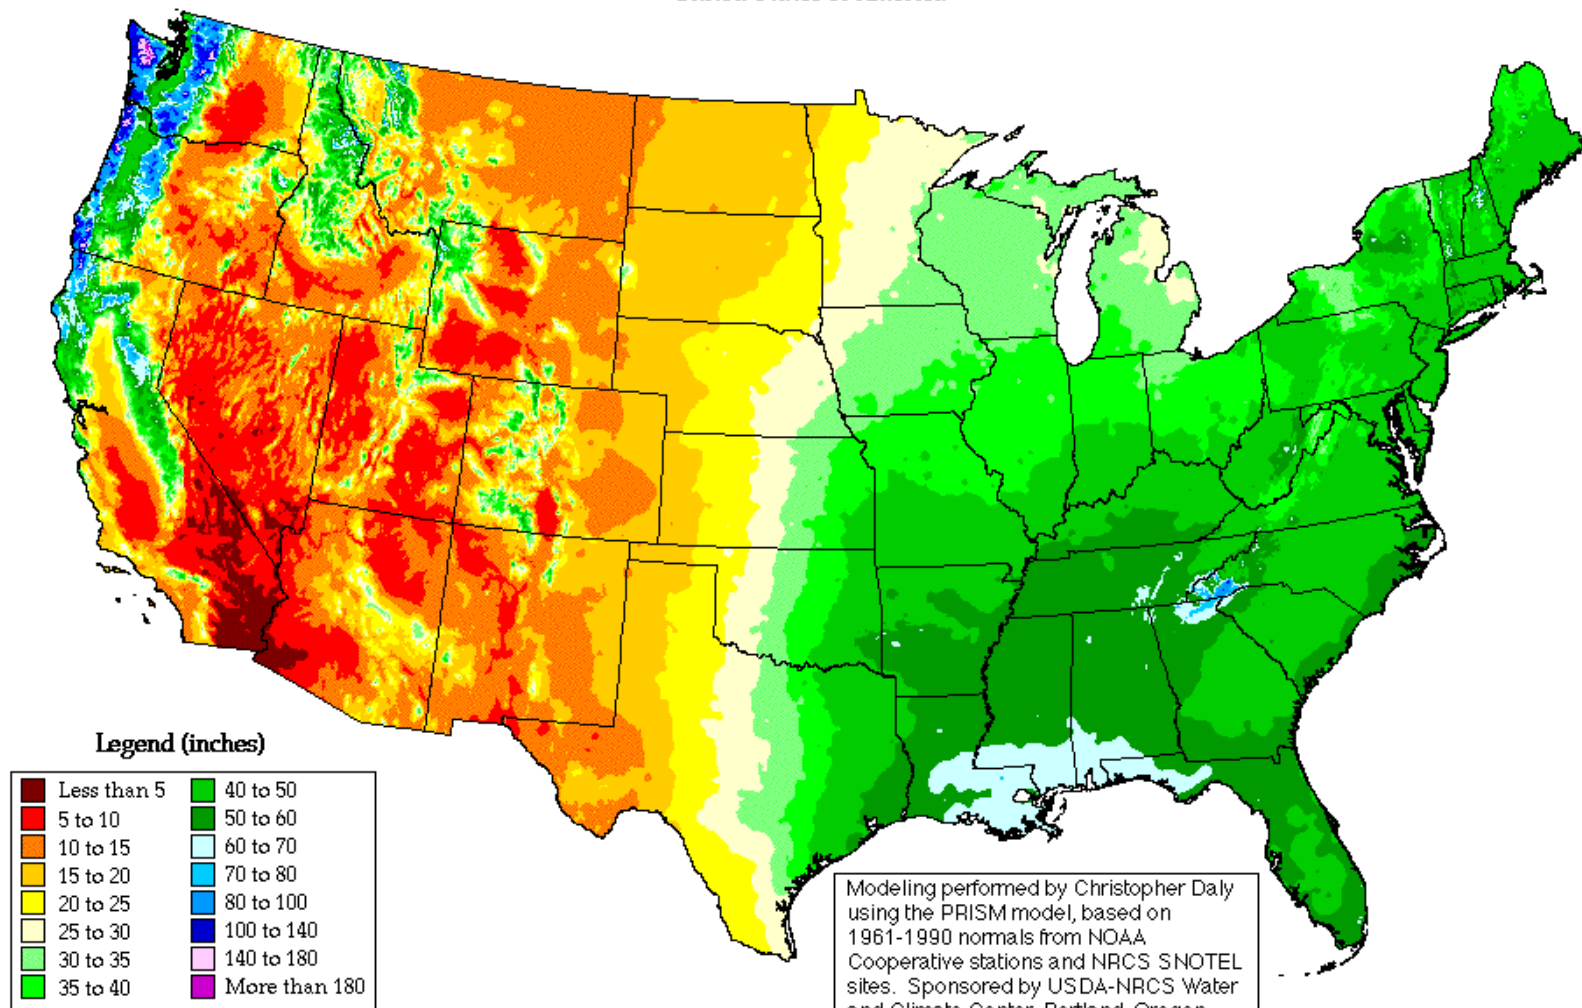

Climate: The statistical characteristics of weather elements over a given period of time.

Some examples:

- Seasonal or yearly average rainfall in the U.S.
- Dominant patterns of sea surface temperatures (e.g. El Niño)
- Daily average temperature at a weather station
- Variability of snowfall

Annual Average Precipitation

United States of America

Period: 1961-1990

Modeling performed by Christopher Daly using the PRISM model, based on 1961-1990 normals from NOAA Cooperative stations and NRCS SNOTEL sites. Sponsored by USDA-NRCS Water and Climate Center, Portland, Oregon.

Oregon Climate Service
George Taylor, State Climatologist
(541) 737-5705

Average Annual Precipitation

Arizona

Period: 1961-1990

This map is a plot of 1961-1990 annual average precipitation contours from NOAA Cooperative stations and (where appropriate) USDA-NRCS SNOTEL stations. Christopher Daly used the PRISM model to generate the gridded estimates from which this map was derived; the modeled grid was approximately 4x4 km latitude/longitude, and was resampled to 2x2 km using a Gaussian filter. Mapping was performed by Jenny Weisburg. Funding was provided by USDA-NRCS National Water and Climate Center.

Summary of Lecture 3

Defined the difference between weather and climate.

Weather is the condition of the atmosphere at a particular time and place: temperature, pressure, humidity, clouds, precipitation, visibility and wind. Be familiar with how each of these is defined.

Looked at surface and upper air station models (as well as weather symbols) and how to interpret them to diagnose the weather. Went through an example of a snowstorm in Colorado in late December.

Climate is the statistical characteristics of weather elements over a given period of time. Several examples of climate data were presented for various time and space scales.
